

Assessment - Frontend Developer

04.03.2024

Today's assessment will prove that you are versatile in approach to creating a website. You will be given Technical Requirements and Expected Outcomes.

You should treat the Expected Outcomes as minimal and required, but we expect you to improve on the Expected Outcomes, if you deem it necessary.

Assessment:

Build a Landing page for a demolition company. Everything within the Landing page must be customizable, as long as it makes sense for it to be customizable.

For customization, you will use a set of JSON files where you shall define your texts, images, lists etc.

The demolition company will not expect to change its branding once the product has been delivered, however another company will work on improving the website SEO.

The SEO company will not make any code-level changes, therefore you should consider adding relevant tags to head.

Technical Requirements:

- Vue
- Tailwind

Expected Outcomes:

- 7 sections: Header, Footer + 5 content sections
- Has a Carousel Section
- Has an About Section
- Has a Gallery Section

- Has a Google Reviews Section
- Has one more section of your choice
- Has relevant elements for SEO

Evaluation criteria:

- Code quality (Grammar, Documentation, Best practices)
- Project structure
- Security
- Following the Assessment & Meeting Expected Outcomes
- Launch the website on a staging environment

Once you finish the project, please inform Valentin about it, and we shall schedule a live demo, and a Q&A Session, regarding your implementation.
